

PARKS CANADA

Goodfellow Terra® pressure treated wood products, using MicroPro® Micronized Copper Azole (MCA) technology, provide longevity and durability for wood used outdoors, as well as having the lowest environmental footprint of any treated wood product available.

Health Canada's PMRA (Pest Management Regulatory Agency) allows MCA treated wood products be used in above ground, ground contact and freshwater applications but Parks Canada has a history of **NOT** following PMRA Label Use Applications. However, individual Parks have requested more information on the products.

MCA treated wood products are now being used in the following National/Provincial/Municipal Parks:

Cavendish Beach National Park
Thousand Islands National Park
Rattray Marsh Conservation Area

Banff National Park
Rideau Canal Historic Site
Algonquin Provincial Park

Goodfellow Terra,
Cavendish Beach PEI
