

# TECHNICAL SPECIFICATIONS

**VIZÜWALL** is a decorative wall panel that offers an innovative solution with a high-end look. Intended for indoor use, it offers endless creative installation possibilities on walls, ceilings, islands, and furniture.

The size of each panel is **16" x 96"**, covering a surface area of 10.67 sq ft.

These panels are made of MDF (medium density fibreboard) either raw or black throughout. All panels comply with the strictest environmental standards (CARB II, TSCA VI).

Two options are available: raw panels ready to paint or lacquer (without any covering) or with a decorative paper, impregnated with melamine resin and thermo-fused on MDF, resulting in a modern look and significant scratch resistant finish.

The panels must not come in direct contact with water. They should be stored flat, on a pallet or stacked with crossbeams between each piece. The panels will expand or shrink depending on the humidity conditions of the environment. It is important to use the proper sawing, milling, and drilling tools when installing your panels. (See our installation video at [www.vizusolution.com](http://www.vizusolution.com)).
