STEP OUT OF THE ORDINARY

PREMIUM DECKING

When it comes to building decks in North America, choosing the best decking wood is crucial for durability, aesthetics, and resistance to the harsh climate.

Exotic hardwood decking provides unparalleled beauty, strength, and longevity that perfectly complements our diverse landscapes and demanding weather conditions.

GOODFELLOW

ipé

DURABILITY	JANKA HARDNESS	BENDING STRENGTH	DENSITY
very resistant	3,680 lbs.	23,360 psi.	1.04g/cm3

Ipé is a hardwood from South America and undoubtedly the number one option for decking.

Known to last for 50 years, **Ipé** is extremely weather resistant, significantly harder, has superior bending strength, and has superb resistance to insects and decay.

When oiled and maintained, its natural gorgeous golden brown colour can darken to a deep reddish mahogany colour. **Ipé** can also be left to sun exposure without losing structural integrity and will gradually fade leaving a silvery grey patina.

cumaru

DURABILITY	JANKA HARDNESS	BENDING STRENGTH	DENSITY
very durable	3,340 lbs.	22,400 psi.	1.07 g/cm3

Cumaru has very similar characteristics to Ipé offering one of the best options in exotic wood decking.

Generally speaking, **Cumaru** is lighter in colour than Ipé and varies from yellow-brown to reddish brown, and with a grain that is more flamed. Similar to Ipé, **Cumaru** can last 50 years with its superb durability and weathering properties, as well as resistance to termites and other dry-wood borers.

Unlike other exotic species, **Cumaru** does not emit tannin which tend to produce stains near swimming pools.

garapa

DURABILITY	JANKA HARDNESS	BENDING STRENGTH	DENSITY
high density	1,630 lbs.	12,900 psi.	.79 g/cm3.

Garapa is an exotic hardwood that is naturally resistant to rot, decay and insect attack. Similar to Ipé and Cumaru, **Garapa** is naturally scratch resistant which allows the surface to remain smooth for many years, making **Garapa** a perfect wood for exterior decking.

When a lighter colour is preferred, **Garapa**'s light golden honey colour is iridescent when cut and matures to a rich brownish colour over time making it a great alternative to Ipé or Cumaru.

Garapa offers a 30 year lifespan with very low maintenance and is offered at a lower price point than Ipé and Cumaru.
